

AMI jukeboxes now include an updated electronics package. Here's what you need to know.

Meet the new AMI Core.

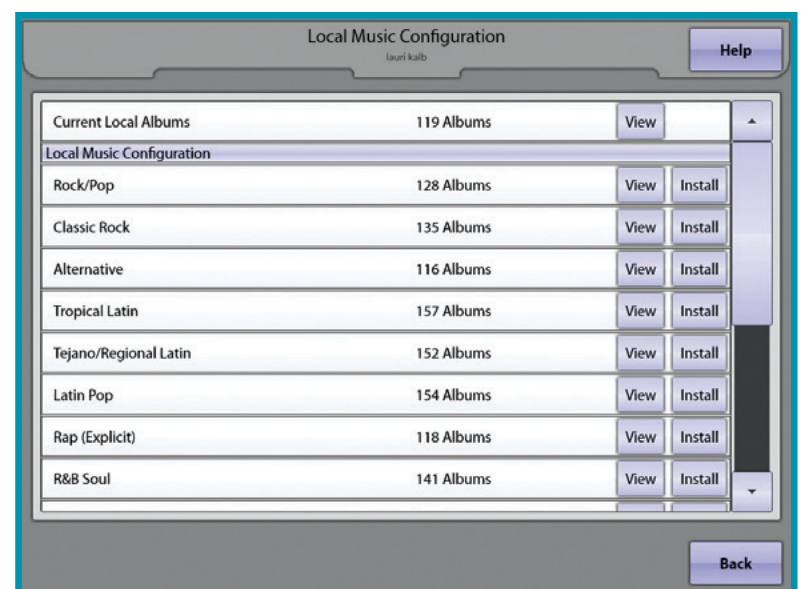

Rowe and Rock-Ola jukeboxes will now share a universal core computer system that houses the hard drive, motherboard, power supply, and I/O controller all inside one easy-to-service package. New features include:

- * New high-capacity hard drive
- * New high-performance motherboard
- * 1 GB of RAM
- * Core system with smaller, clean internals
- * Core system removable with no tools
- * Hard drive removable with no tools

One hard drive covers every genre.

Our new core system includes a 320 GB hard drive, already pre-installed with music genre collections for any type of location. Select a genre during the initial installation to automatically create a selection of 1-credit albums for your jukebox. It's that easy.

Need to move your jukebox and change genres? Not a problem. Our service menu allows you to reconfigure your jukebox at any time. You can even save your current configuration for later use.

Rock-Star redesigned with new amplifiers.

In addition to the new core, Rock-Ola Rock-Star and Rock-Star Lx jukeboxes have been redesigned to use the same 1,000-watt audio amplifier and 4-channel preamplifier as our Rowe jukeboxes. Now all AMI jukeboxes feature the same crystal-clear, pitch-perfect sound.
