

Making Your Jukeboxes Bar Link-Compatible An Operator's Guide

If you have not yet created jukebox locations on the Operator Site:

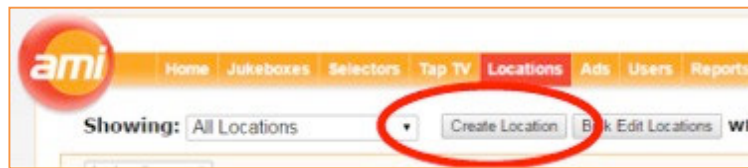

Log in to the AMI jukebox operator site (www.amientertainment.net)

Click on the **Locations** tab (see image below)

(As shown in the image, the site will alert you if there are patrons who have requested Bar Link or if you have locations that need additional setup information for Bar Link to be enabled.)

Click on **Create Location**.
(See image.)

Complete the Create Location Form by filling out all required fields (indicated by red arrows in the image to the right).

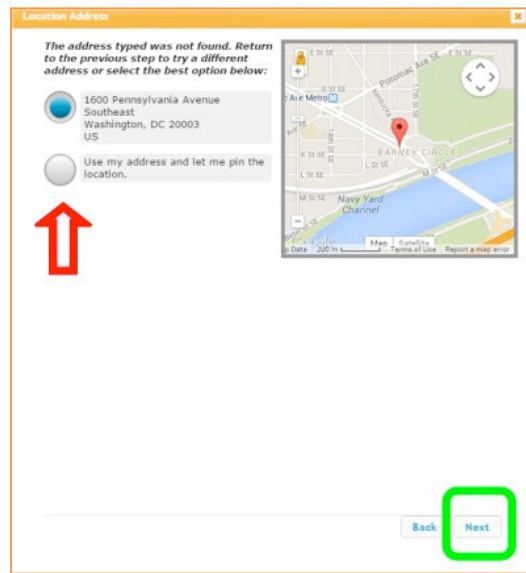

When you're done, click **Next**.

A screenshot of the 'Location Address' form. The form contains several fields with red arrows pointing to them: 'Name', 'Nickname', 'Address', 'City', 'State', 'Postal Code', 'Time Zone', and 'Country'. A map is visible on the right side of the form. The 'Next' button is highlighted with a green box.

Next, you will be asked to confirm the location's position.

If the displayed map position is correct, select the upper button to confirm the location, as shown in the image to the right.

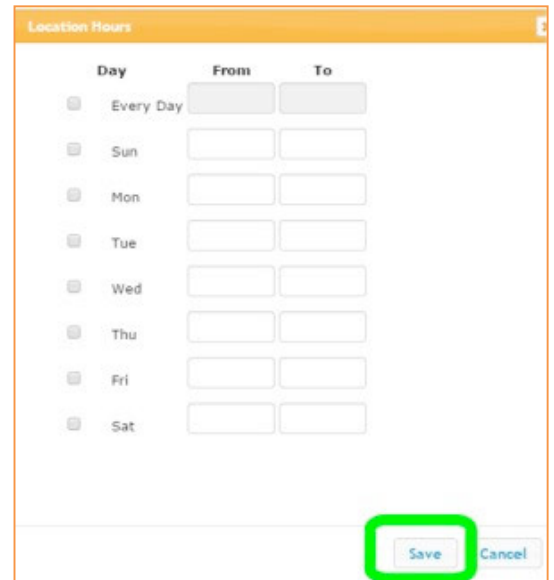

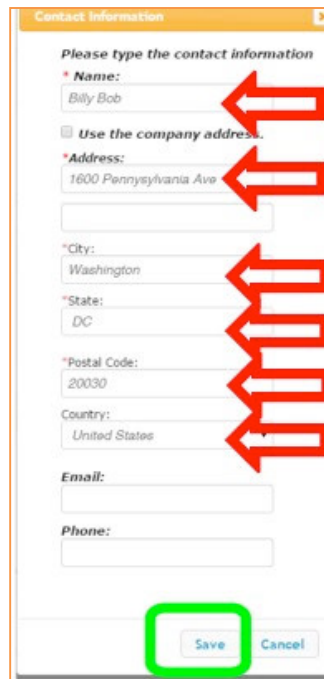

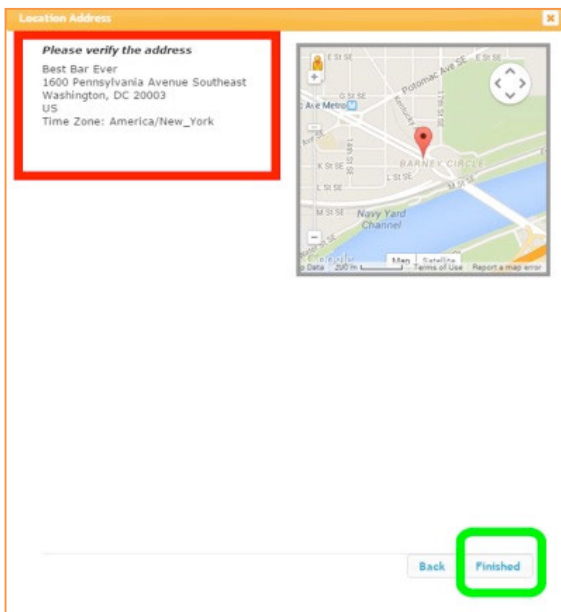

If the location is incorrect, select the lower button and manually position the map icon with your mouse pointer.

You will then be asked to verify the location's address and information. If everything is correct, select **Finished**.

Enter the location's Contact Information.

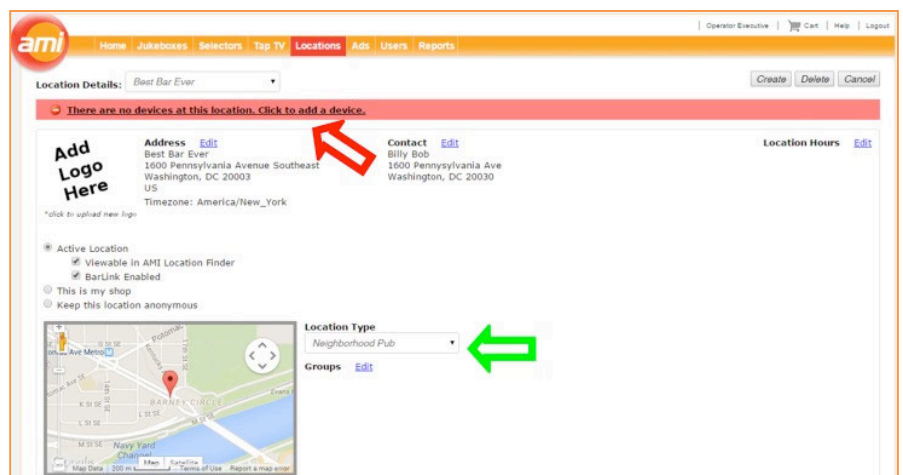

Enter Location Hours (optional)

You will then see a Location Details page for the location you just created.

You have the option of assigning a "Location Type." (Green Arrow)

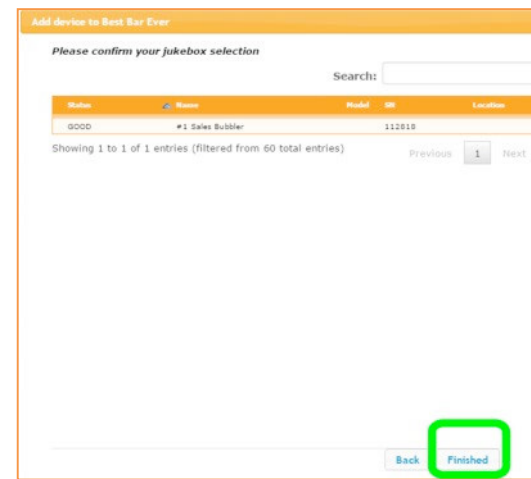

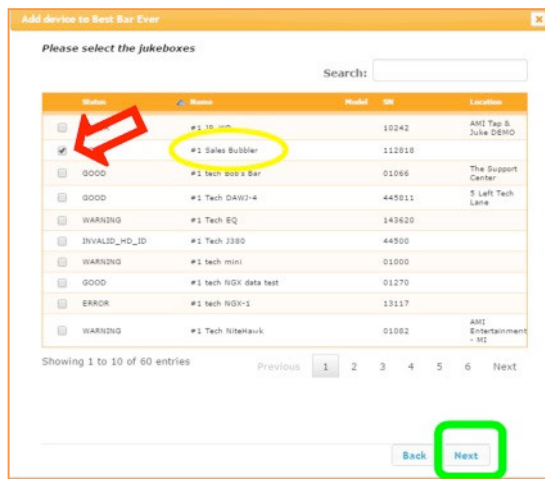

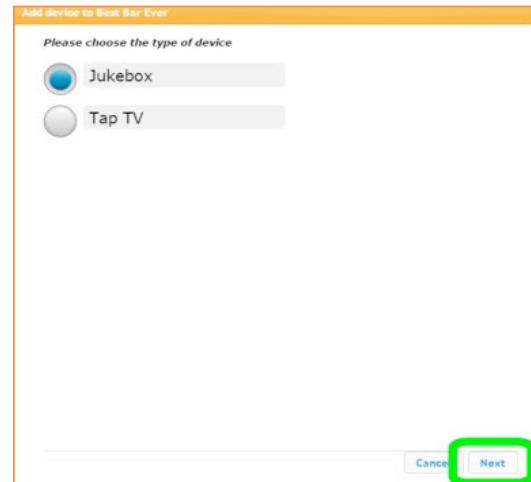

You **MUST** assign a device to the location to complete the step. (Red Arrow)

To add a device to the location, start by selecting the Device Type and clicking **Next** (shown in the image to the right).

Next, select the Jukebox that is installed in the location (bottom left image) and click **Next** to continue.

In the final step, confirm the jukebox is correct (bottom right image) and click **Finished**.

Congratulations!

You have just completed adding Bar Link to your first jukebox. Now repeat the steps for the remainder of your jukeboxes and locations to start maximizing earnings, reducing service calls, and keeping your customers happy.
